

## BEST PRACTICE – II

**Title:** “Green campus-Healthy campus”

**Objective of the practice:**

1. To keep the Campus green and clean
2. To grow more trees with variety
3. To help biodiversity conservation
4. To inculcate eco- consciousness among the students and staff for institution.
5. To create good ambience for the holistic development of the students.
6. To improve the overall health of the people on campus.
7. To support and implement “Swachh bharat abhiyan” for healthy life
8. To use LED light for efficient use of electricity.

**The context:**

As per our Vision and Mission, we strive to excel in Pharmaceutical education and research, but with that our institute is also committed towards health and biodiversity of campus that eventually protect our environment

Campus expansion has resulted in an increase in the use of motor vehicles and resource consumption. Therefore, the college has felt the need to maintain and enhance the greenery in the campus.

**The Practice:**

On the onset of monsoon every year and we plant various types of saplings with the help of students, teaching and non teaching staff in the college. These plants are made available from the nearby government and private nurseries. These are successfully maintained by providing fertilizers and irrigation facility. We conduct the program “**Tree plantation**” every year, and then saplings is then taken care by some volunteers and staffs. By this initiative we have planted many saplings and we have planned to do in huge numbers with years to come. Along with this there are other major activities conducted in campus to achieve the goal of green and healthy campus, the college has displayed Signboards/posters in college campus for encouraging ideas of plastic free campus noise pollution, and environmental awareness. The energy audit of consumption of electricity in the college is conducted recently by certified external auditor. LED

bulbs are installed in the college building to save the electricity. The college has robust rain water harvesting that has resulted in the increase in groundwater level of the bore wells on the campus. This rain water is then utilized in various sources like for practical purpose, watering the lawn, in canteen etc.

**1. Evidence of the success:**

Our lawn is spread across 7052 x 1479 x 1122 sq. ft of sprawling green campus. This practice has resulted in the improved quality of air and subsequently quality of life. The tall trees helps to reduce the sound created by vehicles, it is a proven fact that plant barriers can be a solution to noise pollution. Indeed, plant barriers are excellent solution for the traffic noise.

**2. Problems encountered and resources required:**

No serious problems were faced as such but during the initial phase it was difficult to find the alternative for single use plastic carry bags for the students.
